

Workshop handout — Image 7149

Comparing AI vision models (educator / practitioner · ~2 pages)

Name: _____ Date: _____

1. Your observation first

Look at the projected photo before reading model text.

Species: _____

Scene / setting: _____

Time of day: _____

Lighting: _____

Weather: _____

Background: _____

2. Three models — image 7149 (foggy night trail camera)

Weather - GPT-4o: Fog or haze, misty / humid environment - GPT-4.5: (*empty / not visible*) - Llama: Foggy or misty

Lighting - GPT-4o: Low light, consistent with nighttime - GPT-4.5: Low-light, likely infrared or night-vision image - Llama: Low light, likely nighttime or early morning

Time - GPT-4o: Nighttime (timestamp and low light) - GPT-4.5: Early morning (timestamp 3:30 AM) - Llama: Early morning, around 3:30 AM

Scene - GPT-4o: Open outdoor area, field, grass or vegetation - GPT-4.5: Outdoor, natural grassy area - Llama: Outdoor environment with fog or heavy mist

Background - GPT-4o: Obscured by fog; faint grass/plant shapes lower frame - GPT-4.5: Blurred, indistinct grass and open outdoor space - Llama: Fog or heavy mist obscuring most details

(Dataset: coyote trail-cam folder. CSV compares scene fields only — not species per model.)

3. Do they agree? (*your judgment — not keyword matching*)

Field	Y	Partial	N	What differs?
Weather				
Lighting				
Time				
Scene				
Background				

Y = same fact · **Partial** = overlap but someone adds/omits something · **N** = different claims

4. After instructor reveals scores

Script verdict: _____ (*hint: high divergence*)

Biggest gap between your table and the script? _____

Auto-save to a database without review? Yes No Some fields only

5. Discuss in pairs

1. When all three agree, is that enough to trust the label?
 2. Where did models use **different words for the same idea**?
 3. Where did they **disagree on facts**? (*Note: one model skipped weather.*)
 4. One **classroom activity** using this compare-then-verify pattern: _____
 5. What images should **not** go to a cloud AI in your setting?
-

Reference: 334-image coyote set · 5 high-divergence outliers · **species not in comparison CSV** · agreement truth

This image is a review-queue example — hard scene (fog), not just paraphrase.
